Subject: Application for the Position of DevOps Engineer

To whom it may concern

As a DevOps Engineer with 3+ years of professional experience in the IT industry, I apply with great interest for this role.

I am currently the Lead DevOps Engineer-cum-Manager at Datacultr, where I oversee the development and maintenance of a \$20k continuous integration and continuous deployment of multiple environments, both in mixed on-premise, bare metals, and cloud servers. Mirroring your requirements, I:

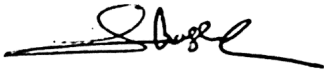

- Create automated scripts to build, configure, deploy, and test applications for different levels of environments
- Lead a team to develop system-engineering solutions to achieve highly available, and highly scalable systems
- Maintain, support, and enhance project deliveries.

In addition to my professional experience, I hold Masters in Computer and Information Sciences, USA. I am familiar with all required tools and solutions including Docker, Terraform, Kubernetes, AWS, Microsoft Azure, Openstack Private Clouds, Python, ELK, Grafana, Zabbix, Redis, Kafka, and PostgreSQL. I communicate effectively with both technical and non-technical stakeholders and excel at investigating/analyzing information and drawing conclusions with RCA and 5Y Analysis.

I loved every minute of my time at Datacultr but as I am interested to pursue my career in Deutschland, I am now seeking a stimulating opportunity for a position in your organization.

Please find attached my CV for your consideration. Thank you very much for your time. I look forward to hearing from you regarding the next steps.

Kind regards,
